Task 2

Group 11: Michael Hüppe, Leon Korkmaz

G_1 intersects with S_1 and S_4:

$\text{Area}(S_1) = 3$, $\text{Area}(S_4) = 5$

$\text{Area}(G_1) = 4$

$\text{UE}(G_1) = \frac{[\text{Area}(S_1) + \text{Area}(S_4))] - \text{Area}(G_1)}{\text{Area}(G_1)} = \frac{(3+5) - 4}{4} = \frac{4}{4} = 1$

G_2 matches S_3 perfectly:

$\text{Area}(S_3) = 2$

$\text{Area}(G_2) = 2$

$\text{UE}(G_2) = \frac{[\text{Area}(S_3)] - \text{Area}(G_2)}{\text{Area}(G_2)} = \frac{(2) - 2}{2} = \frac{0}{2} = 0$
